

CANNON

CANNON

2007 CATALOG

INDUSTRY'S #1 WARRANTY

**C**annon Safe is proud to introduce our 2007 catalog of home security and gun safes. As you browse these pages, we want you to know that we at Cannon are committed to producing for our customers the best product at the most competitive price—and then standing behind that product with the best warranty and service in the industry.

We believe a home security safe is a permanent investment. When you choose to protect money, family photos, collectibles, firearms, and other things that are important to you and your family, you should have peace of mind that your valuable items are secure. That security is part of our promise to you: We believe you should have real security at an affordable price, quality in all aspects of the product, as well as a lifetime warranty that means you are actually protected from fire, flood, attempted break-in and manufacturing defects. As a Cannon Safe owner, you also have access to knowledgeable service technicians with the authority to fix any Cannon Safe issue on the spot.

At Cannon Safe, we are also committed to our employees and have developed a manufacturing system that rewards productivity while producing a consistently high-quality product in a safe, environmentally friendly workplace. We have been, and will continue to be, the pioneer in product design improvement and new methods of production. We don't just make a safe—we design and engineer products that perform to the highest standards of quality and security.

Thank you for considering our product.

CANNON SAFE INC. • BETTER THAN IT HAS TO BE.

# NO-COST WARRANTY.

HOW DO YOU CHOOSE A SAFE? LOOK AT THE WARRANTY.

## SERVICE AFTER THE SALE

Gun safes today in many ways have become like automobiles. Each manufacturer offers unique features, making their product different from the rest. Manufacturers are quick to entice you to buy, with special promotions and details about what they will do for you before you buy their safe, but very few talk about what they do AFTER the sale. Unfortunately, many safe consumers end up paying more after the sale than what they paid for their safe.

## CONSUMERS PAY MORE AFTER THE SALE BECAUSE OF POOR WARRANTIES

While many warranties sound complete, they often do not cover drilling a safe open or shipping the safe cross-country to the factory. These two steps alone often cost more than \$1,000.00. Cannon Safe is the only manufacturer to offer a ZERO COST warranty; we pay for drilling the safe open and freight round-trip from your home to the factory.

## "THE PROOF IS IN THE PUDDING"

Suppose your gun safe was attacked as shown by the safe on this page. After an attack, fire or flood, how do you get back into it? Let's examine the steps involved:

1. Safe drilling or opening	\$150-\$300+
2. Safe repair, if possible, in-home	\$150-\$500+
3. Freight to factory	\$300+
4. Freight to home from factory	\$300+

**CANNON CUSTOMERS PAY \$000**

## THE CANNON SAFE DIFFERENCE

We believe that purchasing a safe is one of the best investments you'll ever make and that your decision is permanent. We believe the warranty should provide hassle-free NO COST repair or replacement after a flood, attempted break-in, break-in or fire. YES, you read it correctly. We are the only company to offer free parts, free labor and free freight for repair of your safe after a burglary, flood or fire. Contact your local dealer for details.

## NOT ALL WARRANTIES ARE CREATED EQUAL

Before buying a safe, ask the following questions:

1. Will you fix the safe in-home?
2. Who pays for a safe tech to open the safe?
3. Who pays for a safe tech to repair the safe?
4. If repair is not possible in-home, who pays the freight to the factory and back?

SEE CANNON OWNER'S MANUAL FOR COMPLETE WARRANTY.

# FIRE PROTECTION

INDUSTRY'S #1 WARRANTY

**FIRE CAUSES NEARLY 6 BILLION DOLLARS IN DAMAGE EVERY YEAR, WITH A NEW FIRE STARTING EVERY 55 SECONDS.**

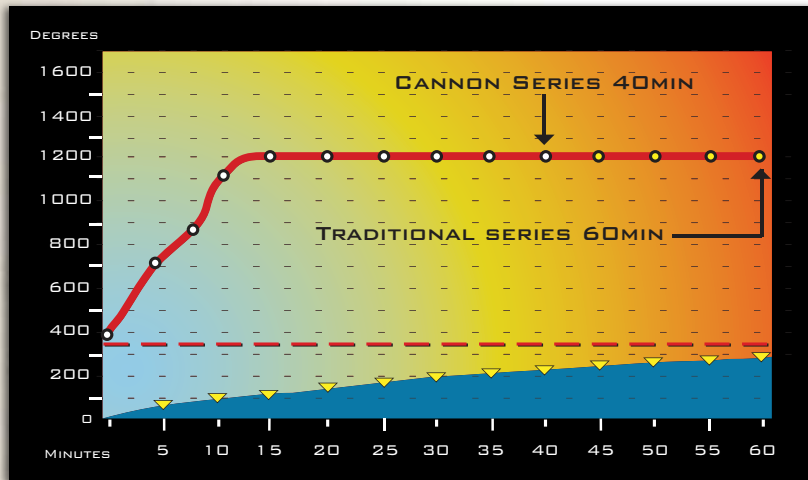

CONSUMERS SHOPPING FOR GUN SAFES ARE SURE TO BECOME EXTREMELY CONFUSED OVER THE "BROAD" CLAIMS MADE BY MANUFACTURERS.

Many of these claims are just that - CLAIMS - with no accepted scientific data to support the claim. When a safe is tested by a non-accredited laboratory, using an unpublished test, it is nearly impossible to verify the claims. When shopping for a safe, consumers should look for a safe that has been fire tested by ETL® or UL®. Both of which are recognized world wide, and are the only testing facilities in the safe industry that will allow consumers to actually verify claims made by the safe manufacturer.

## RAMP-UP TESTING

### CANNON'S TEST

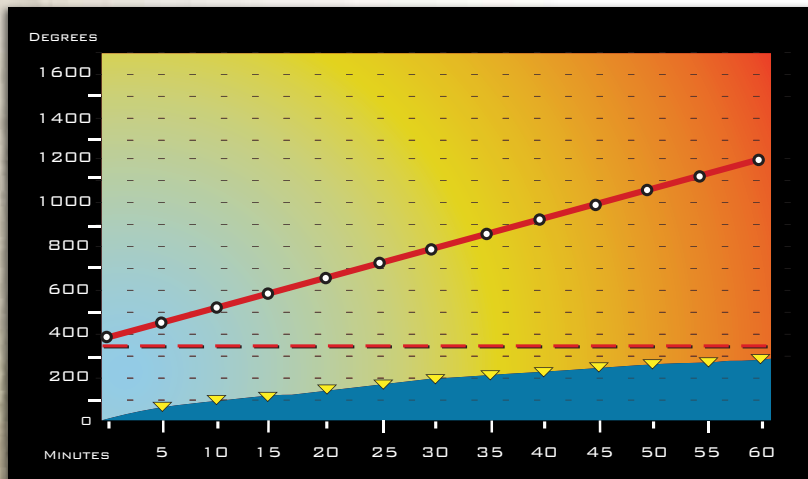

**TRUE:** RAMP-UP AND MAINTAINED TEMPERATURE ARE THE KEY FACTORS IN A "RECOGNIZED" TEST.

A rapid ramp-up test (reaches 1200°F in 10 minutes) is obviously tougher than a test taking one hour to reach 1200°F.

### COMPETITOR'S TEST

**FALSE:** A SLOW RAMP-UP, LONG-TIME TEST IS SUPERIOR TO A FAST RAMP-UP, SHORTER-TIME TEST.

**ABOUT INTERTEK—**  
World's Leading Fire Testing Authority

**ETL—FOUNDED IN 1896—**  
Over 100 years of recognized testing.

**GLOBALLY RECOGNIZED—**  
Testing everywhere for products everywhere—Testing labs in 14 countries worldwide.

**COMPLETELY INDEPENDENT—**  
Intertek is NOT a consultant—they do not work for the manufacturers they test, which ensures scientific results based on test data.

## THE FACTS BEHIND FIRE TESTING

### WHEN BUYING A SAFE IT IS IMPORTANT TO UNDERSTAND HOW IT WILL PERFORM IN A FIRE.

- Will it live up to the claims that were made?
- Will your valuables be safe?
- Are you paying for protection that just isn't there?

### CONSUMER BEWARE!

- Many safe manufacturers have chosen to make exaggerated fire claims. The presence of a printed fire label does not necessarily represent the performance of a valid test.

### WHY CHOOSE CANNON SAFE

#### • SIZE MATTERS

Accredited laboratories like ETL and UL require the largest safe in a series to be the safe that is tested. The other safe manufacturers not using accredited Laboratories can exaggerate their claims by burning smaller safes, and then applying the results to their larger safes. This simply doesn't work. For example, when we burn our 35 cubic ft. safe and our 8 cubic ft. safe, which are both constructed the same exact way, the 8 cubic foot safe will last 1 hour 15 minutes while the 35 cubic ft. safe will last 40 minutes.

#### • THERMO-SENSORS

Thermo-sensors are devices used to measure temperatures at any given point, both in the safe and in the furnace. Measuring the temperature inside the furnace is as important as measuring the temperature inside the safe.

#### • FURNACE TEMPERATURE

The furnace's ability to maintain a consistent test temperature is a vital component of a valid fire test. The Intertek-ETL verified test requires a minimum number of thermo-sensors with very specific placement. This requirement ensures that the furnace temperature is maintained to testing requirements. The Intertek-ETL verified test exceeds the number of thermo-sensors required under UL 72 guidelines.

#### • PLACEMENT OF THERMO-SENSORS

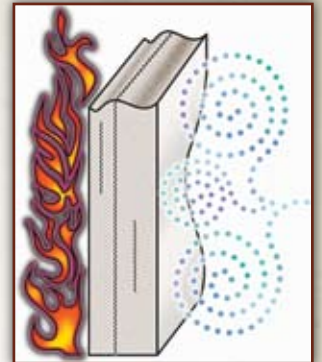

The temperature inside a safe during a fire can vary drastically between the bottom and the top. As heat rises, the top of the safe is the hottest spot in any test. Many manufacturers limit their thermo-sensor placement or don't put any at the top of the safe.

#### • POSITION OF SAFE WHEN TESTED

A safe in your home stands upright, and a reliable fire test should include the safe in the same position; however, some facilities do not have a furnace large enough to stand a safe upright, so a test is done with the safe lying on its back! Because the weight of the door helps maintain a tighter overall door seal, it appears that the manufacturer has a better testing result. Cannon safes are tested upright just as they are positioned in your home or office, with reliable and trustworthy results.

#### • THERMO-SENSOR READINGS

Fire safe ratings are based on the readings provided by the sensors placed inside the safe during testing. When any sensor in the safe reaches 350 degrees the test should then stop. Some companies will only use sensor readings from the lower portion of the safe in order to prolong the test. **With this information you can see why some fire labels will use a disclaimer in very small print that reads, do not place top shelf with in 18 inches of the ceiling.**

1 HOUR AT 1200° F

TEMPERATURE VARIANCE  
FROM TOP TO BOTTOM IN  
TYPICAL FIRE TEST.

SECURITY AT ITS FINEST.

TRADITIONAL SERIES

# TRADITIONAL SERIES

## ROUNDED BODY

Cannon Traditional Series safes set the world standard for how safes should look and protect. When you see Cannon's Traditional Series safes, you know you are getting the best money can buy. This luxury-packed series exudes elegance inside and out. We begin with high-quality materials and a security design backed by over 40 years of manufacturing experience. This series features an impressive 12-step paint process that complements the titanium-plated five-spoke handle and keypad. The silk-screened deluxe graphics package and hand-finished pinstripe make this safe very attractive. The rounded outside edges give the safe a graceful look while adding strength and rigidity to the body. The inside detail of this safe is truly a craftsman's dream. We begin with a plush upholstery package, oak-faced shelving, Tru Rack interior and a notched top shelf designed to accommodate a wide range of firearms. Not just a pretty safe, but the best combination of Elegance, Security and Fire Protection.

# TRU RACK™ by Cannon Safe Inc.

INDUSTRY'S #1 WARRANTY

Just as the name says-it's the only gun rack on the market designed to hold a rifle in every slot!

## THE PROBLEM

Like the car market, which is notorious for overstating MPG most safe companies overstate how many long guns can really fit in their safes. Just as the picture shows (picture A)-we tested a competitor's safe that claims to hold 14 rifles, yet only 9 actually fit. The comparable-size Tru Rack held 25% more than the competitor's rack and holds exactly what we Claim. Every slot was utilized. (see picture C)

## THE SOLUTION

The Tru Rack, just as the name states, holds a rifle in every slot! Cannon's new barrel down or up interior allows you to use every slot in the rack. (see picture B)

## WHY IS BARREL DOWN STORAGE IMPORTANT?

First, storing some rifles barrel down allows more rifles to fit! The reason is simple-the stocks take up lots of space by storing some barrel down (stock up) the available floor space is increased. Secondly, experts agree that storing wood stocked firearms barrel down is critical in preventing excess oils and unwanted condensation from damaging the wood stock. Storing barrel down allows excess oil and condensation build-up to drain out away from the wood. Also, with the soft padded interior floor, the crown of your rifle will be protected as well.

Cannon's new dual position rack allows for true capacity storage unlike most gun safes in which the interior rack does not allow for each slot to be used. Cannon's new barrel down or up interior has solved this problem allowing you to use every slot.

## ADDITIONAL BENEFITS OF THE CANNON TRU RACK INTERIOR

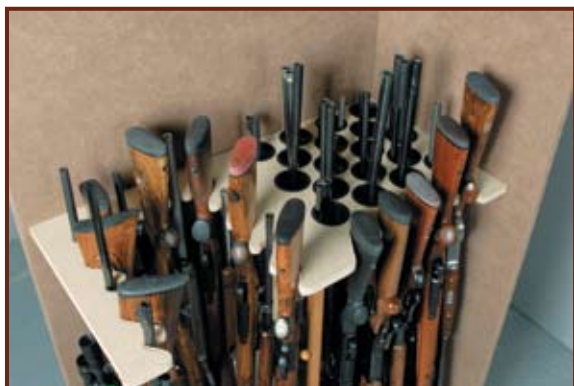

- Notch in top shelf allows storage of long firearms
- Adjustable side and top shelves
- Upholstered with ultra-clean, lint-free automotive grade material
- May be used in half-left, half-right, or all-rifle modes.

If you plan on using your safe, it's important to choose an interior that will hold a rifle in every slot! Choose Cannon's Tru Rack interior system.
